Landscapers by Nature

Winter Newsletter

Our team is looking forward to managing the snow and ice at your property this season and showing you what we do best!

Landscapers by Nature is a proud member of SIMA - the Snow and Ice Management Association, and we take great pride in our work. We serve the city's top property managers and proudly perform meticulous groundskeeping at a range of properties all throughout Calgary.

We will respond within 24 hours of a snowfall ending, as well as every 24 hours during a continuous snowfall. We regularly complete site checks to monitor drifts and to keep ice from building up. **Please be aware that slip hazards can exist at times between our visits. You may have access to ice melt or gravel bins on your site to help prevent this. (Enquire with your Account Manager if you would like a quote on these bins)**

Typical Snow Storm Schedule

Day 1: Priority is creating safe pathways around the property
Day 2/3: Return to widen pathways and perfect the edges

What We Need From You:

- **Extension Cords/Dog Leads:** Please do not leave extension cords and dog leads across walkways. We cannot see them under the snow and our machines will eat them up. This is extremely dangerous and will cause **significant operational delay**. Cords damaged this way will not be replaced.
- **Parking:** Please do not park in designated snow pile areas. There are limited spaces for snow, and some visitor parking spots may be used. Cars may be towed if necessary.
- **Caution:** Please use caution around machinery and **do not allow children outside when the plow is operating, or to play on or in the snow piles, as they both present safety hazards**. Please do not drive closely behind machinery as we may back up unexpectedly.
- **Ice Melt/Gravel:** On-site ice melt/sand/gravel bins may be available for resident use. Please refer to the Ice Melt article for more information.
